-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 6-14, 16-22, 24-36, 43-61 & 63 are rejected under 35 U.S.C. 102(e) as being anticipated by USP 6,284,197 to Abbott et al. (herein referred to as "Abbott").

The applied reference has common inventors with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Abbott teaches liquid crystal devices that detect the interaction of any analyte with a surface to which the liquid crystal is coupled (col. 13, lines 4-7). The substrate is made of any physicochemically stable material non-reactive towards the liquid crystal layer. It may be an inorganic glass (col. 14, lines 45-55). A metal layer may be deposited on the substrate (col. 15, lines 32-50). The metal may be gold, silver, etc. Abbott teaches self-assembled monolayers

formed from alkanethiols on thin, semitransparent films of gold (col. 19, lines 28-31). The liquid crystal taught by Abbott can be nematic (col. 30, lines 48-54). The liquid crystal can be 4-cyano-4'-pentylbiphenyl (col. 32, lines 7-9). See also col. 18, line 48; col. 44, lines 62-65; col. 50, lines 19-28.

Allowable Subject Matter

3. Claims 5, 15, 23, 37-42, 62 & 64 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach or suggest that the liquid crystal comprise a nitrile group. The prior art does not teach or suggest that the device further comprise a pump. The prior art does not teach or suggest that the functional group that the alkanethiol reacts with is a biogenic amine or a phosphorus compound. The prior art does not teach or suggest that the semiconductor-based material is gallium arsenide.
